

SHOOF FACT SHEET

HORNUP DEHORNER

Shoof Code
213 670

FEATURES	BENEFITS
• Microprocessor driven	Guarantees a consistent temperature during cauterization and manages a regular cycle time for each dehorning
• Ergonomic design	Allows for proper horn bud positioning avoiding burning accidents
• Powered by NiMh battery	Fully charged, it allows for about 40 heads to be dehorned and over its lifetime, 30,000 dehornings

PRODUCT INFORMATION

Horn'up is a brand-new debudder on the world market. It is manufactured in France by ACIME Technology, a significant electronics manufacturing company. Horn'up uses new NiMh battery technologies to give extra power in what is still a lightweight convenient tool. Horn'up will debud 40 calves on one charge. A full recharge will take up to 16 hours if the Horn'up is fully discharged. Discharge is micro-processor controlled to ensure debudding time is constant throughout battery cycle. A signal is given when the correct de-bud time (about 7 seconds) has elapsed. Lights indicate battery charge level. Horn'up is protected by a one-year guarantee (excluding wear, parts and battery). At Shoof we have confidence in recommending Horn'up as the best cordless debudder available on the market today. This machine is not only latest technology, but it is comfortable and comes complete with 240v recharger, and full instructions, in a sturdy plastic case. The replacement tip assembly includes ceramic head, heat ring and fixing screws.
