- World first
- Self tenting
- Protected needle - user safe
- High quality
- Accurate dose - every time

PRODUCT INFORMATION

Sekurus is the new award-winning patented 'safety' vaccinator from Simcro. This development followed some years of work, in several parts of the world, to produce a vaccinator that eliminated needle-stick injuries, or possibility of injury. The result is a shroud on the vaccinator tip that keeps the needle covered until the applicator is pressed onto the hide. The shroud then retracts allowing the vaccinator trigger to operate. The trigger will not operate until the shroud is retracted. Another feature of this new applicator is the small spikes on the shroud front, which 'tent' the skin for proper vaccination (see diagram). These dial-a-dose applicators use only 16g x 1/2" needles (3 supplied). Extra needles are available on Shoof code 204 833 (box of 12). Delivery tube not supplied. A spare parts list is included.
