TAILWELL TAIL TRIMMER

FEATURES	BENEFITS
<ul style="list-style-type: none">• Safe - inner blade wont move	<ul style="list-style-type: none">• Means you wont cut the tail or the animal
<ul style="list-style-type: none">• 3 - 4 seconds per tail	<ul style="list-style-type: none">• Trimming can easily be accomplished during milking
<ul style="list-style-type: none">• Circular blade	<ul style="list-style-type: none">• It cuts right round the tail at once so only one upward motion is required to trim the tail completely, cutting next to the skin the whole way round this means that the blade stays sharper for longer as it will be cutting underneath most of the dags unlike a conventional flat cutter
<ul style="list-style-type: none">• Fits any standard battery drill	<ul style="list-style-type: none">• It is portable so there are no dangerous power cables required for operation, also you are free to move around in the confines of the pit freely
<ul style="list-style-type: none">• Neck strap	<ul style="list-style-type: none">• Allows the operator to be hands free between cows

PRODUCT INFORMATION

A remarkable tail trimmer developed in New Zealand. The trimmer is unique as it trims the tail right round at once, unlike the conventional style with a flat cutter. The front of the devise has a fixed circular inner blade over which the outer circular blade oscillates.

It cuts efficiently on the first up-motion while trimming, as all hair grows in the downward direction, the cutting action is fast and smooth, taking only 3-4 seconds to run up the tail.

Even dirty dag ends feed smoothly over the trimmer, Most dags have a clean section next to the skin, this is where the trimmer cuts naturally.

It is a simple chuck assembly that fits a standard 14-volt battery unit power drill. It is preferable to have two speed lightweight drill but with a maximum of (1,250 rpm), higher cutting speeds do not work better, and may damage the cutters, and will void any warranty.

The trimmer must be kept well oiled using the oil supplied or with ordinary engine oil. The trimmer is a sturdy but precision tool that will withstand considerable use.

WARRANTY

- The warranty is void if it has not been properly lubricated
- High powered drill operating at above 1,250 rpm will void any warranty void if machine is used for contracting work
