

Tail Trimmer

Power Drill Attachment

Re-order code: 211 997

Tail Trimming Made Easy

- Developed & manufactured in New Zealand
- Simple drill-chuck attachment for regular (cordless) power drill
- Quiet smooth cutting action
- Only 3 or 4 seconds per tail
- No risk of injury to the cow
- Easily accomplished during milking
- Fits most battery operated drills
- Neck strap to secure hands-free

Note: Recommend 14V drill or better. Drill not included.

Tail Trimmer Power Drill Attachment

Developed in New Zealand by Ian Saywell, this is a remarkable device. It is a simple chuck-attachment for any 2-speed battery power drill of at least 14 volts. (1000rpm and long life battery is ideal.) The front of the device has an oscillating outer blade inside which the inner blade is fixed. The cutting action is smooth and fast, taking only 3 or 4 seconds to run up the tail. Even dirty dag-ends feed smoothly over the trimmer. Pre-cutting the tail's switch is not necessary. This is a sturdy, but precision tool, that will withstand considerable use. Gear oil is introduced at the start of use, and after each 50-100 tails, through an external lubrication point provided. The cutter tension is adjustable. Replacement cutters are available. A neck strap is provided to allow the operator to be hands free between cows. Trimming can easily be accomplished during milking.

Tail Trimming Apron (accessory)

An essential accessory for the power tail-trimmer is our specially designed apron. This garment incorporates a large bag with rigid plastic hooks which are hung on the pit rail where they can easily be slid along cow-to-cow. (The hooks are suitable for rails up to 50mm diameter.) When the bag needs emptying the wearer simply steps out to the required place and pulls the Velcro bag attachment apart, letting the trimmings fall out. Bag will hold 50-100 tail trimmings.
