

Udder Comfort™

North America's #1 Udder Product

Udder Comfort™ is the gold standard on the farm and in the show ring. The lotion or spray contains essential oils that soften and soothe the udders of dairy animals.

Very good success has also been found here in New Zealand. North Island veterinary advisor, Hugh Jellie, Dairyconcepts, holistic herd health, has been evaluating Udder Comfort over the past 3 months with very good results.

Udder Comfort Blue Spray

- Contains a blend of tea tree oil and mint oil
- Blue dye - so you can see where applied

- For use on udder only, not teats
- For more information visit www.uddercomfort.com

Application Guide

- Pre or post calving - 8 applications
- Hard quarter - 10 applications

Udder Comfort

North America's #1 Udder Product

Testimonial from Hugh Jellie...

North Island veterinary advisor, Hugh Jellie, Dairyconcepts, holistic herd health, has been evaluating Udder Comfort over the past 3 months with very good results.

A New Zealand herd of 600 cows, for example, was having problems with high somatic cell counts. The cows were screened: 40 cows were dried off or culled, 10 received conventional intra-mammary treatments and 10 received applications of Udder Comfort. "In this situation (after 3 days), Udder Comfort was effective, with no withholding of milk," Jellie reported.

"There is a useful role for this product in the management of udder conditions."

Testimonial from Mike Davies...

"...a very promising product. We did 40 cows out of 280 and saw SCC drop 100,000 in the bulk tank." - Mike Davies

"We saw Udder Comfort™ at Fielddays™, and we are very surprised by our results. This is a very promising product. Our somatic cell counts (SCC) were always 280,000 before. I like to stay under 300,000, and with Udder Comfort we were able to get it even lower. It's now at 175 to 180,000 after we used Udder Comfort on 40 cows out of 280 and saw the SCC drop 100,000 in the bulk tank," says Mike Davies. He has 350 cows at his farm near Auckland.

"We checked the cows with the Mas-D-Tec and found 40 cows with suspicious quarters. We sprayed Udder Comfort on those quarters, after milking, for 10 milkings in a row. For 15 of those cows, we did this for 5 more milkings.

"It took only one month to see the 100,000-drop in our bulk tank SCC. To keep it there, we continue to check suspicious cows once a week, and we spray Udder Comfort, as needed, for 5 to 10 milkings.

"We are also going to use Udder Comfort on our dry cows and heifers before calving to see how they do in the first year with mastitis and production.

"We definitely have fewer cows needing mastitis treatment now. We have only one cow-at the most-to treat. Before, we were treating 4 or 5 cows a week.

"I think it's always better to be preventive than to try to cure. The satisfaction for me is in keeping the animals healthy, and not getting mastitis. That's what we all strive to do."
