

DEBUDDER ELECTRIC....

SAMS High-power

opt'l 14mm tip	201 737	\$18.95
repl't 18mm tip	201 738	\$18.95

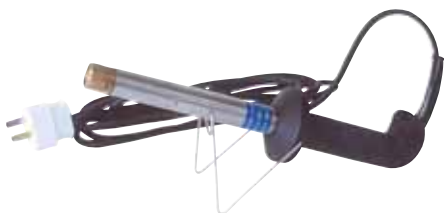

This 240v high-power SAMS debudder from France is 200W and heats to a maximum of 700°C. Allow 15 minutes to reach full heat. This model is most suitable for outdoor use in cooler areas. 1-year guarantee. Replacement tips screw in. This is our hottest electric debudder.

Eurofarm

complete (18mm tip)	210 458	\$255.00
repl't 18mm tip	210 460	\$34.95
repl't 15mm tip	210 459	\$34.95

Eurofarm is a quality European brand made in Germany. This is a high quality 240v tool with 250W power output and combining the best features of several models. Ergonomic grip design. Heat to 620°C operating temperature in 12 minutes. A feature of this debudder is the close proximity of the element to the tip ensuring best maintenance of heat output in all conditions. Tips are of stainless steel for long life. The Eurofarm debudder is supplied with a raised stainless steel stand for resting the device on during heating and between uses.

Quality

cpt (18mm tip)	201 728	\$329.00
repl't 18mm tip	201 727	\$19.95
opt'l 13mm tip	201 730	\$19.95

This German-manufactured 240v tool is of highest quality manufacture with an extremely robust element. High 700°C operating temperature. The handle design incorporates a flat top area to give an easy pad for hand pressure, without damaging the cord, and also a wire stand to rest the hot iron on during use.

DEBUDDER TIP SIZES

All measurements given are internal diameter of tip cavity. Tip walls are usually about 2mm thick at the edge, giving outside diameters about 4mm larger than inside measurements. We recommend tip sizes from 13mm to 16mm for calves up to six weeks old, and larger sizes for older calves. Kids usually require tip sizes larger than 16mm for successful debudding.

New

Cordless Horn'up

complete	213 670	\$899.00
repl't tip assy	213 677	\$129.00

Horn'up is a brand-new debudder on the world market. It is manufactured in France by ACIME Technology, a significant electronics manufacturing company. Horn'up uses new NiMH battery technologies to give extra power in what is still a lightweight convenient tool. Horn'up will debud 40 calves on one charge. A full recharge will take up to 16 hours if the Horn'up is fully discharged. Discharge is micro-processor controlled to ensure debudding time is constant throughout battery cycle. A signal is given when the correct de-bud time (about 7 seconds) has elapsed. Lights indicate battery charge level. Horn'up is protected by a one-year guarantee (excluding wear parts and battery). At Shoof we have confidence in recommending Horn'up as the best cordless debudder available on the market today. This machine is not only latest technology, but it is comfortable and convenient to use. Supplied complete with 240v recharger, and full instructions, in a sturdy plastic case. The replacement tip assembly includes ceramic head, heat ring and fixing screws. (See a product demonstration on our website.)

DEBUDDER NOT AVAILABLE
DISCONTINUED MODEL

Heavy Duty (Parts Only)

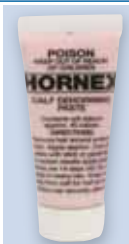

repl't 18mm tip	201 725	\$29.95
opt'l 14mm tip	201 724	\$29.95

Although this model debudder has been discontinued by the manufacturer, we still have the replacement 18mm tips available.

SAFETY

Take extreme care using electrical appliances such as our electric debudders outdoors. Use an isolating transformer. Take extra care with extension leads.

DEBUDDING PASTE....

Hornex

201 749 \$13.95

Well known reliable brand of paste made in New Zealand by Shoof. 20gm (0.7oz) tube will treat approximately 45 calves. Apply direct from the tube and spread carefully with a knife or spatula.

White

201 750 \$22.95

Very popular and successful paste. Can be applied directly from the applicator nozzle. Use sparingly. The 6oz (170gm) contents will treat up to 300 calves.

NB: Not suitable for use on goat kids.

Dr Naylor

201 748 \$19.95

A very popular debudding paste in USA. Many users claim it is preferable for suckling calves, as the paste dries quicker than other brands (but be sure to separate calves from nurse mothers until paste is completely dry). Apply from pot with knife or spatula. The 4oz (113gm) pot will treat approx 200 calves. Instructions on container.

NB: Not suitable for use on goat kids.

Scissors Horn Bud Trimming

17cm 207 570 \$19.95

For successful debudding with a cautery (heat) tool it is important to firstly trim the hair from around the horn bud. If hair is trapped under the cautery tip it can prevent the complete elimination of blood supply to the horn tip, and thus allow the horn to continue growing (similar to incomplete ring barking of a tree). Our horn bud trimming scissors have the blades curved upwards with one tip pointed and the other blunt, for easiest and safest use. Length 17cm o.a. Stainless steel manufacture.

INVERTERS AND GENERATORS

Due to the possibility of varying power output from these devices, our guarantees do not cover debudder failures when powered this way.

ANIMAL WELFARE CODE REQUIREMENT

Dehorming must not be carried out on animals less than 12 hours old. Pain relief must be used on animals over nine months old. In all cases refer to the Biosecurity NZ website <http://www.biosecurity.govt.nz/animalwelfare/codes>
