

## PRODDER HOT-SHOT....

### 'Green' Rechargeable

with 34cm shaft	207 542	\$399.00
with 59cm shaft	207 543	\$409.00
with 85cm shaft	207 544	\$419.00
240v charger	205 242	\$59.00
12v lead	205 241	\$49.95

Exactly the same Hot-Shot Green prodder is available with a rechargeable battery pack, which can be recharged 300 to 500 times. This can give very large savings for regular prodder users, and is a worthwhile investment for anyone expecting to change batteries more than three times per year. 240v transformer charger or 12v cigarette lighter outlet recharging lead available. Prodder is supplied with protective rubber boot over handle end.

NB: Charger is not supplied with these prodders.

### Rechargeable Battery Pack

batt. pack	205 240	\$199.00
------------	---------	----------

Take a moment to work it out. How many battery changes do you do in your prodder each year? If more than 3 or 4, then you will save money and time with our optional rechargeable battery pack. Slides into the same compartment as the standard batteries. 240 volt charger or 12 volt lead required, as for Hot-Shot rechargeable prodders this page.

### Pinkeye Patches

calf x 10-pack	205 148	\$52.95
adult x 10-pack	205 147	\$52.95
extra glue each	205 149	\$22.95

Pinkeye is most often a late-summer problem, generally caused by bacteria from flies or insects entering the eye of calf or adult. The bacteria melt the surface of the eye causing an ulcer to develop. Early identification and treatment is the key to control of this painful disease. After treatment with antibiotic or other topical remedy (consult your veterinarian), the pinkeye patch can be applied to protect the eye and aid recovery. The patch will fall off naturally in about 10 days. Our patches are Shut-Eye brand from USA. The Shut-Eye size allows some natural movement of the eyelid. Each pack of 10 patches includes glue and instructions for use.

*Hot-Shot is the big name in electric prodders anywhere in the world. Manufactured in USA, these are state-of-the-art tools designed for the rough and tough. Hot-Shot prodders feature a fully-sealed motor unit. If ever your prodder fails a replacement motor can simply be slipped into place, and you are in action again. No tools or special skill required. A leather wrist thong, with safety key is attached.*

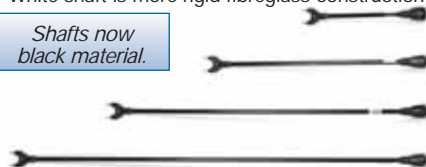

### 'Green' (Super-power)

with 34cm shaft	207 547	\$249.00
with 59cm shaft	207 548	\$259.00
with 85cm shaft	207 549	\$269.00
with 110cm shaft	207 545	\$279.00
with 130cm shaft*	207 546	\$279.00

The Green model is the brand leader of the Hot-Shot range. This is their highest quality model with highest power output. Each is supplied complete with one of the famous Hot-Shot red polycarbonate flexible shafts, which are easily replaced if damaged. The shock output is serious stuff, so we ask you to use these prodders with care. Supplied complete with 6 special heavy duty Hot-Shot 'C' batteries.

\* White shaft is more rigid fibreglass construction.

Shafts now black material.

### Shaft only

34cm	205 248	\$49.95
59cm	205 249	\$59.00
85cm	205 250	\$69.00
110cm	205 246	\$85.00
130cm*	205 247	\$85.00

Shaft lengths quoted are over-all from prodder body flange to tips. Shafts are made of polycarbonate, an amazing material that will bend incredibly without breaking. If you do manage to break one, replacement is simple and at reasonable cost.

\* The 130cm shaft is made of more rigid white fibreglass. The white fibreglass shaft from the Blue prodder can also be used on the Green model.

### Batteries C-cell

6 pack	205 230	\$19.95
--------	---------	---------

Prove it for yourself if you like! Hot-Shot 'C' cell prodder batteries are more powerful and longer lasting than other standard 'C' batteries, yet not more expensive. Standard in all Hot-Shot prodders.

### 'Blue'

with 70cm shaft	207 540	\$169.00
shaft only (white)	205 234	\$46.95

The Blue Hot-Shot (red colour) is the economy prodder in the range. It still has the high quality manufacture and modern features of the 'Green' range, but with a lower power output and shorter battery life. Also, this prodder features the traditional white fibreglass shaft rather than the more flexible red polycarbonate shaft. However, all Hot-Shot shafts and components are compatible with the Blue prodder, and it can even be upgraded with the Green motor if more power is required. Supplied complete with 6 Hot-Shot 'C' batteries.

### 'Blue' Truckie Special

59cm flexi shaft	207 541	\$179.00
------------------	---------	----------

Following requests for our lower cost 'Blue' prodder but fitted with the higher cost polycarbonate flexible shaft, we now offer the 'Truckie Special'. Great quality and reliability but a lower cost than the top-of-the-range 'Green' Hot-Shot. Supplied complete with 6 Hot-Shot 'C' batteries.

### PRICE REDUCED

### Power-Mite (4000v output)

prodder only	205 238	<del>\$149.00</del>	\$139.00
holster only	205 239	\$39.95	

The Power-Mite is the world leading compact prodder for close-up work. Ideal for the vet bag or farmer pocket. Weatherproof press-button type activation for most accurate control of shocks. Unbreakable case. Fully electronic circuitry for long trouble-free operation. Only 15cm x 5cm x 3.2cm and 300gm weight. Leather thong attached. Uses two standard 9 volt alkaline batteries. Belt holder available.

### Battery Tester

209 112	\$24.95
---------	---------

Every farm should have one. Instead of wasting batteries galore, changing them 'just in case' they are flat, now use this handy tester. Easy-to-read dial. Takes batteries of all brands, AAA, AA, C, D and 9v cells. Made by Hot-Shot, USA.
