## CALF PULLER....

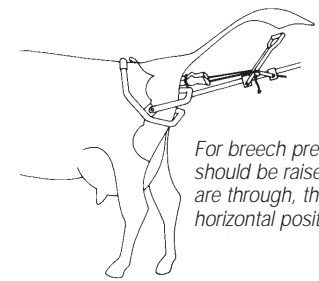

### OUR PREMIUM CALVING AID

Note: legs should be attached individually to puller, not together.

For normal presentation Vink pulls downward until head is drawn, then raise to horizontal pull to finish.

For breech presentation Vink should be raised until hips are through, then lowered to horizontal position.

### Vink Calving Jack

standard model cpt	201 034	\$899.00
long pole model cpt	201 038	\$925.00
replacement ropes	212 143	\$17.95

The world-wide best selling calving aid from Europe. Hangs-on to the cow whether she is standing or goes down in the middle of the job. The permanently attached holding frame fits over the cow's hip bones, acting as a steady and fixed base from which the Calving Jack tilts and pulls regardless of whether the cow stands, sits or stretches out. This calf puller was developed after extensive institutional research into the forces required for the safest and most humane birthing assistance. All stainless steel. Standard pole is 1.6m long and long pole 1.8m long. The long pole will fit the standard model Calving Jack. Rump frame 51cm wide (inside measurement).

### Vink Beef Cattle

complete	201 033	\$1,295.00
----------	---------	------------

The Vink Beef Cattle is an upgraded version of the standard and famous Vink Calving Jack. It is specially constructed of heavy duty stainless steel components to fit larger beef cattle. The main pole is increased to 1.8m long (from 1.6m for the standard Calving Jack) and is a larger tube made of heavier material. The rump frame is enlarged to 57cm width to suit very heavy European breeds such as Charolais etc. The frame is also of stronger materials to prevent any bending, and the traction device features a longer handle for greater power with reduced effort in difficult births. Also the tension is alternate on this model, to give better pulling power.

### HK121

complete	201 012	\$699.00
----------	---------	----------

This model HK calf puller incorporates the same shaft and head assembly as the HKE11, but features a new upgraded traction assembly. This part now features a very handy thumb-operated release lever for quick release of tension.

### HK CALF PULLERS

Our HK devices feature hooks for either sequential or tandem pulling. Extra care should be taken with sequential pulling not to apply excessive force. Always check the calf is properly aligned before applying force. HK pullers also feature 1.7m-long break-apart shafts, which reduce the calf puller to components only 85cm long, easy to transport and store. The HK traction device incorporates a quick-release feature for added safety for man and animal. All spare parts are available, but exact model identification details must be supplied when ordering.

### HK Ropes

pair	201 031	\$19.95
------	---------	---------

Special eye-spliced traction ropes for your calf puller. Make pull-knots to suit calf puller hooks. Eye spliced ends feature multi-layered "pad" area to protect ankles of new-born calf. Length 50cm o.a.

### HK126

complete	201 013	\$1,095.00
----------	---------	------------

The HK126 uses the same upgraded mechanical components as the HK121, but features a new head assembly with specially incorporated 'antlers'. These antlers move together, and fix over the hips of the cow in a similar fashion to the Vink Calving Jack. As with all HK calf pullers, one of the great advantages is the device will break down into small components for easy transport and storage.

### HK Wings

set cpt	201 011	\$59.95
---------	---------	---------

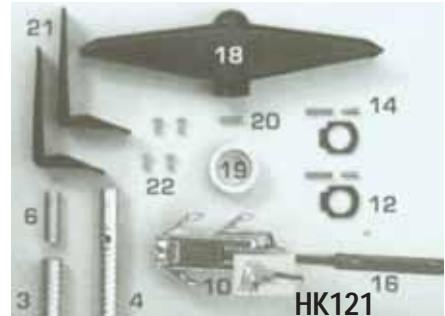

Use this set of two plastic 'wings' plus bolts and nuts to replace broken parts, or to upgrade your old model 'wingless' HK calf puller.

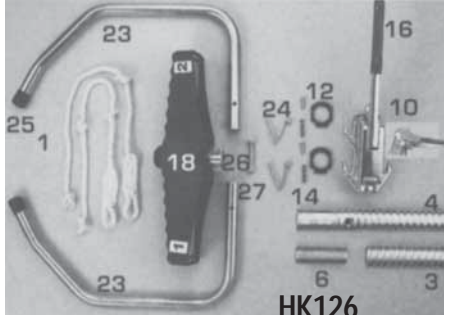

### Calf Puller HK121A

	210 522	\$999.00
--	---------	----------

The HK121A calf puller has all the benefits of the HK brand including the very user-friendly traction device, and the break-apart shaft, and also the benefits of the Vink-style rump frame. This all makes for a top-of-the-range calf puller at a very reasonable price.
