

## UDDER COMFORT....

### UDDER COMFORT

Every now and then some new product astounds us at Shoof. Udder Comfort is one of those. Manufactured in Canada, this product contains a blend of essential oils, and in particular tea tree oil. Since being introduced to Udder Comfort in the spring of 2009, a fast growing number of New Zealand dairy farmers are getting some quite amazing results. Our file of user testimonials is growing all the time. Our expectations of farmer response to Udder Comfort have long been surpassed. Udder Comfort is available as a lotion or a spray. A small amount is applied to the udder (not the teats) once or twice daily, for a few days. Results become evident almost immediately.

### White

110ml lotion	212 369	\$27.95
300ml lotion	212 367	\$65.95

White Udder Comfort lotion has no un-natural additives. It is not visible after application, and thus is most suitable for discreet use on domestic-animal ailments. White lotion is not available in sprayable form.

### Blue

110ml lotion	212 365	\$29.95
300ml lotion	212 366	\$69.95
500ml spray	212 362	\$99.95
4-litre spray	212 363	\$775.00
60-litre spray*	212 571	\$8,750.00
220-litre spray	213 211	\$P.O.A.

The addition of blue food colouring to white Udder Comfort has the advantage of it remaining visible on applied areas. Blue Udder Comfort is available in both lotion and sprayable form. The larger containers can be decanted into an empty 500ml Udder Comfort bottle or other spray device.  
\*Plus freight for this container.

### ORGANIC

### Yellow

500ml spray	212 364	\$99.95
4-litre spray	212 931	\$775.00
60-litre spray*	213 102	\$8,750.00
220-litre spray	212 932	\$P.O.A.

Yellow Udder Comfort qualifies for organic dairy use. As well as the regular Udder Comfort tea-tree, peppermint and almond oils, it contains turmeric and lecithin, and alcohol to enhance absorption. (Yellow spray must be shaken well before use.)  
\*Plus freight for this container.

*"As we run the springer mob through the shed we look for those heifers that are bagging up and spray their udders with Udder Comfort. It helps them settle in, and I know it gives them relief because I can feel the cooling on my hands"*

Lisa Hicks, Manawatu

*"We have a lot of heifers calving at the moment and Udder Comfort is working like a dream. When Udders are softened post-calving the heifers are not so touchy and the herd stress levels drop"*

Desrae Scown & Clinton Fisher, Taranaki

*"We're always looking to improve the stock around here. We routinely monitor our herd and use Udder Comfort to soften and soothe the cows' udders. We are really glad that we tried this product."*

Doug Storey, Waikato

*"From the start of the season we used Udder Comfort on all of our heifers, and some of the cows, to soften and soothe the udders before and after calving. It is great to have a natural alternative which costs very little."*

Andrew & Debbie Young, Waikato

*"Seeing is believing with Udder Comfort. The animals have set up so well after calving. From these great results we will definitely use Udder Comfort as part of our ongoing stock management."*

Roger Luscombe, Taranaki

*"Udder Comfort is a very promising product, the satisfaction for me comes from keeping the animals' udders healthy. That's what we all strive to do. We are going to continue using Udder Comfort on our dry cows, and on our heifers during calving."*

Mike Davies, Auckland

### Udder Gun

complete 206 955 \$495.00

Invented and developed in recent years by Waiuku dairy farmer Max Irwin, the Udder Gun is a different concept in teat sprayers. It uses compressed air through a special nozzle to emulsify the spray. This allows previously un-sprayable products such as Udder Comfort, to be easily sprayed. But the really big benefit is this system reduces the amount of spray used by about 20-25%. With high-value products such as Udder Comfort, this means the Udder Gun will pay for itself very quickly (especially for users of 60-litre drum lots). This is aside from the great savings in time that the Udder Gun brings. The Udder Gun container holds one litre of product. This is held in one hand, with the Udder Gun in the other. Air pressure required is about 30-35 psi and volume usage is not high, so a small portable-type compressor is all that is required to operate it.

### Udder Singe Butane Wand

complete	212 626	\$265.00
gas refill	212 657	\$23.95

Excess hair growth on udders can be a serious source of contamination of milk, and also a factor causing mastitis infections. Eliminating excess udder hair reduces significantly the amount of mud and manure accumulating on the udder. This dirt can be a significant cause of environmental mastitis. Udder Singe uses a low-temperature butane flame to burn hair away in 1-2 seconds, without causing any pain or damage to udder or teats tissue. Singing of udder hair is common practice in the northern hemisphere. The Shoof Udder Singe is supplied complete with a 650ml canister of butane gas. The wand is 75cm long with a plastic grip. The flame is controlled with an adjustable valve, to produce a 'lazy yellow flame' which will not burn the udder (This flame can be tested by running your hand through it). Extra butane gas is available at any camping supplies store. The gas fitting is universal.
