Custom Brand - special brand or cypher in a 3 inch or 4 inch diameter digit mould. Exact full-size detailed drawing must be supplied by post, fax or email. Brand will be cut directly from the detail received.

Brandabull is the fantastic new system of freeze branding developed by Mr Peter Griffiths in New Zealand. From his experience in the gas supply industry, Mr Griffiths realised that the greatest hindrance to widespread use of freeze branding was the logistical effort that had to take place prior to doing the job. Dry-ice or liquid nitrogen must be brought to the site, and used promptly. Surplus coolant is wasted. There is pressure to complete the whole job in a short time, regardless of any other farm demands.

With Brandabull, branding can take place at any time or place as suits the operator. Dry ice is made on the job in the nozzle of the Brandabull gun from a CO2 cylinder. The ice is produced directly into the required digit mould until it is full. The mould is then applied to the hide as for a normal iron freeze brand.

Call Shoof for more information, or visit the Shoof website www.shoof.co.nz

GAS USAGE

In normal conditions users should get up to 15 x 3 inch brands per kilogram of CO². More or fewer brand will be possible using 2 inch or 4 inch digits.
