IS V-Vaximate 10ml

203 946 \$3.55

Contains: piston seal, piston felt washer.

Ezepak Drench System

(nil drench container) 210 076 \$72.45

The Ezepak Drench System has been developed to make drenching jobs easier. Instead of a hard cold pack of drench on your back all day, the Ezepak System incorporates the drench container into a comfortable air-mesh padded, non-sweating modern-style back pack. Everything has been thought of with Ezepak. The drench gun can be passed through the pack without disconnecting from the drench container, making for easy and clean refilling. The System pack is equally suitable for top or bottom outlet drench containers in all sizes up to 5 litres. The pack features retainer tabs for securing the drench hose to prevent it getting caught up on animals or posts. The waist-belt drench gun holster leaves you hands free at anytime.

NB: A drench container or gun is not supplied with the Ezepak Drench System.

Ezepak Vaxiholster

210 078 \$19.95

The Ezepak vaccine holster is made for ease of use and operator comfort. No messing around with those vaccine-pack neck strings. Just slip the pack into the holster for quick change-overs. The shoulder strap prevents the pack swinging about when working. Easy to get on and off. Pockets on pack for product label and needles packet.

NB: The Vaxiholster does not include the belt holster or vaccinator shown above.

Ezepak Vaxiholster Cool-pak

chest pack 210 079 \$21.95

arm mount 212 437 \$21.95

The Cool-pak holster has all the advantages of the standard Vaxiholster, but with the advantage of thermal insulation to maintain cool temperature of sensitive vaccines, and to prevent over-heating of vaccines when work stops for tea-break or yard changing. Arm-mount model has an elasticized arm band. On the chest-pack model the shoulder strap is detachable, allowing the pack to be belt mounted.

Ezepak Belt w Holster

belt complete 210 077 \$25.95

vacc'r insert only 210 080 \$4.95

The Ezepak Belt is the ideal companion to the Ezepak Vaxiholster. The belt is the same as supplied with the Ezepak Drench System, but with addition of a special removable insert for the drench gun holder to make it ideal for packing a vaccinator. This insert part is also available separately if you need to convert your Ezepak Drench System belt for use as a vaccinator belt. The Ezepak Belt is ideal for use with any drench or injector gun up to 20ml, to enhance your drenching or vaccinating work.
