

Sheep Cuff Durak

standard size (14cm)	205 679	\$75.95
ram size (17cm)	205 678	\$79.95

The Sheep Cuff was invented and developed by South Australian sheep breeder Peter Durak in the early 1990s. It is a simple device to quickly and conveniently immobilise a sheep. The two front legs and one back leg are slipped into the cuff which is then snapped closed (see photo below). Very useful when a sheep needs checking or treatment (e.g. flystrike) to ensure it stays where you want it to. The Standard cuff will fit larger lambs (10 weeks or more), hoggets and ewes. The Ram cuff is suitable for Rams and large crossbreds. Dimension is length o.a.
 Note: The Durak cuff is the original Australian-made high-quality product of corrosion resistant alloy with stainless steel spring. Beware of cheap imitations.

Stock Sorting Paddle

205 924	\$49.95
---------	---------

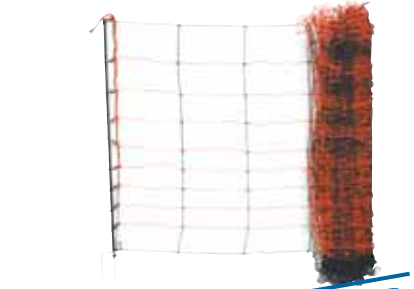

Stockmen have at times made up their own device for this purpose, using a tin of stones on a stick. Our stock sorting paddle consists of a hollow 30cm x 16cm paddle with noise-making beads inside. Lightweight, highly visible and noisy. Nice soft rubber grip. Length 107cm o.a.

Sheep Netting Repair Kit

211 826	\$9.95
---------	--------

Kit of spare nylon plus insulators and connectors, for repair of damaged fence netting.

Sheep Netting Earth-Wired

50m x 105cm	211 825	\$129.00
spare post only	210 826	\$12.95

The great feature of our Earth-Wired flexible netting is that each second wire is an earth wire. This ensures that the animal is shocked regardless of dry ground conditions. The netting also features rigid vertical struts every 30cm, giving the fence greatest rigidity and integrity even when ground is hilly or uneven. Supplied in 50m roll with 14 dual-prong step-in plastic posts. Earth-Wired netting is especially ideal for sheep, goats, dogs and all small animals. This netting is highly UV resistant.

Sheep Netting Ovinet

50m x 108cm	211 898	\$349.00
spare post only	210 826	\$12.95

This is our top selling netting, specially designed for use with sheep and goats. It is completely flexible, using non-electrified vertical nylon strands which are welded at every crossing to the electrified horizontal strands. Current is through three stainless wires in each strand, except for the bottom strand which is not electrified. Vertical strands are 17cm apart, for good integrity of the fence. Each 50m fence includes 14 dual-prong step-in plastic posts. Fence lengths can easily be connected for longer runs using the combined loom at each end.

Shearing Handpiece Heinger 12v

complete	210 715	\$1,050.00
repl't comb	213 226	\$84.95
repl't cutter	211 978	\$17.95
comb lifter	211 980	\$129.00
